

Session 2: Improving the Availability of Fruits and Vegetables

Objectives

- Provide guidance for strategy development to increase the availability of nutrient-dense FV globally.
- Determine the challenges and provide solutions in increasing the global FV supply.

Discussion Questions

- What are the major challenges in making (safe, fresh) FV available in both low- and high-income countries?
- What technology, organizational, and/or infrastructure innovations are needed to reduce postharvest losses of FV?
- What are the new trends in FV processing that have the potential to maintain FV nutrient quality, as well as quantity?
- What roles can agrobiodiversity play in increasing FV availability?
- How can the nutrition, health, agricultural, and business communities better collaborate to expand access to affordable FV for people in all incomes?
